RADAR & LIDAR Basic Certification

Thank you for your interest in a 20-hour **Basic RADAR & LIDAR Certification** course of instruction by Law Enforcement Services, LLC. This course meets and exceeds all National Highway Traffic Safety Administration (NHTSA) standards and has been taught to thousands of police and military personnel throughout the United States and Canada. The cost of this course may be covered by charging a basic tuition fee for each student or by contracting a set fee that may be paid through training budgets. The average course usually costs about \$3,100 as follows:

Basic RADAR & LIDAR Certification Course	1,500.00
Student Manuals (24.95 per student X 20 students)	499.00
Travel Expenses (airline, car rental, food, lodging*)	1,100.00

Therefore, officer tuition of \$155 per officer with 20 officers will cover this cost. The hosting agency is responsible for collection of all tuition fees and for paying Law Enforcement Services, LLC with a single check at the completion of the course of instruction. The hosting agency may elect to send additional personnel up to 25 officers maximum. The only additional fee would be for student manuals at \$24.95 each. In the event the hosting agency does not have 20 officers registered for this course, the course may still be held provided the hosting agency accepts the total \$3,100 cost of the course. (*Note: Lodging prices vary from location to location and may account for an additional expense.)

The hosting agency shall be responsible for providing a training facility (classroom), complete with audio and video capabilities for PowerPoint presentations. (Law Enforcement Services, LLC, can provide a projector and sound system for an additional fee in the event this equipment is not available at your facility.)

Required Equipment:

Each officer is required to have a basic scientific calculator capable of trigonometric functions (sin, cos, tan), such as a Texas Instrument TI-30. (These calculators cost less than \$20.00.)

All officers are encouraged to bring the radar and lidar equipment their department currently uses.

Law Enforcement Services, LLC will bring the latest in radar and lidar technology.

Student Manual:

All officers receive the book **Understanding Police Traffic RADAR & LIDAR** written by the owner of Law Enforcement Services, LLC. Les Langford served as a state trooper for 30 years and supervised his department's speed measuring training program for 8 years. He has operated, tested, and trained officers in radar, lidar, vascar, and various other time-distance speed measuring devices throughout the United States and Canada. This 200 page training manual is continually updated with the latest in radar and lidar technology and case law.

Course Information:

This course is covered over a 3-day period with early out (noon) on the third day. The course includes 16 hours of classroom instruction with a written final exam, plus 4 hours of practical hands-on training. Additional field experience may be documented by individual departments for further verification of training if needed. A course agenda is available by clicking on the appropriate link.

Instructor Courses:

Law Enforcement Services (LES) also certifies experienced officers as instructors. For more information on hosting a 40-hour **RADAR & LIDAR Instructor Certification** course. Click on the appropriate links for more information.
